 87. SEMI TRANSPARENT MOON
 88. COSMIC PLASMA

THE FACE OF THE MOON

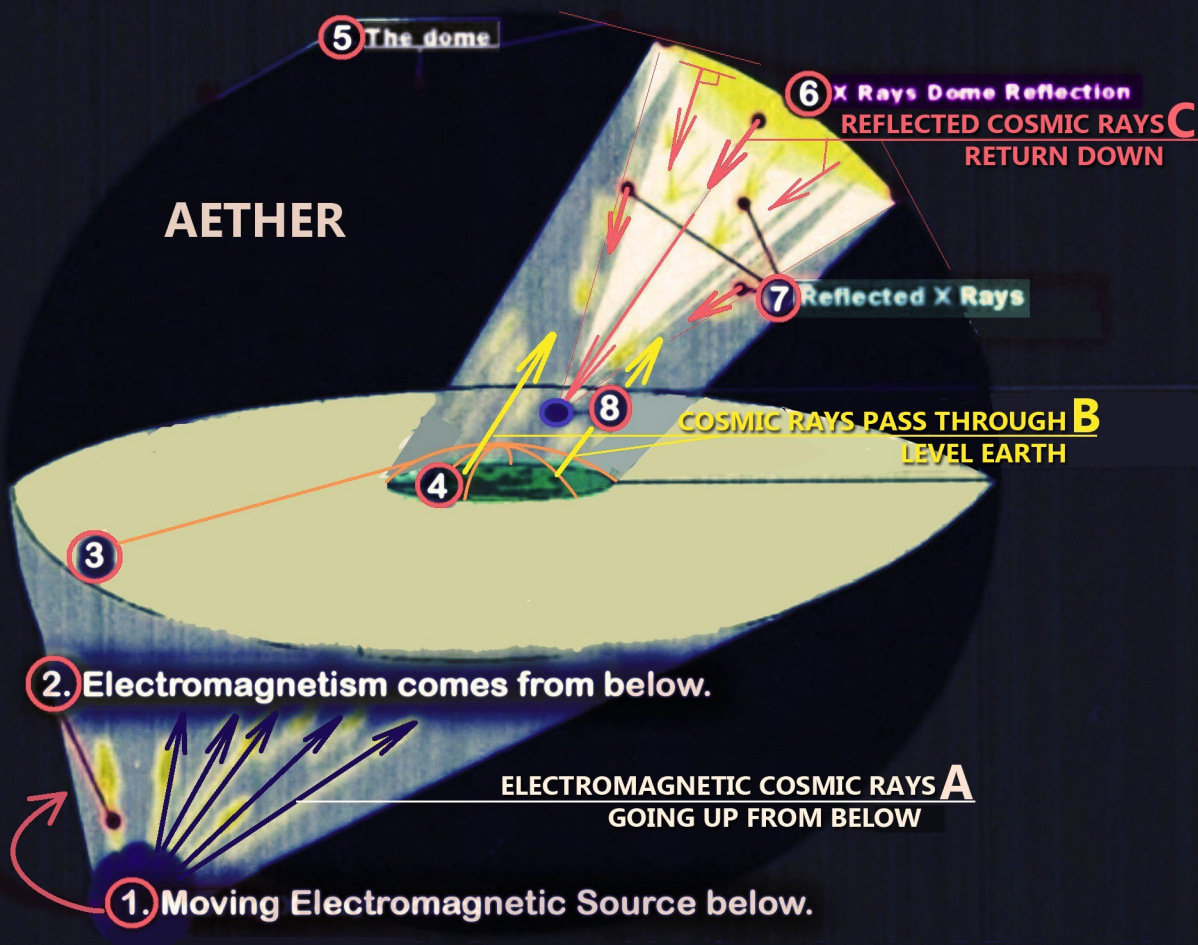

We always see the same face of the moon.

That happens because the moon is a Cosmic Plasma Phenomenon. The moon is not land but a focused electromagnetic energy light with it's own phases.

It takes place in a semi aetherial toroid field above because of the electromagnetic energy that comes from below, our level plane. On the face of the moon we can see the material field that is below, the world that we live in, mirrored, working like a level earth's selfie.

MOON CREATION

1. Coil Moving Electromagnetic Source.
2. Electromagnetism comes below Flat Earth.
3. Out of the 1st dome area
4. Flat Earth water and land surface.
5. The 2nd dome
6. Electromagnetic Rays Dome Reflection.
7. Reflected from the Dome electromagnetism back down.
8. Focused Light Spot Creation, because of an aetherial reaction in big pressure, that gives fluorescence (The Moon).

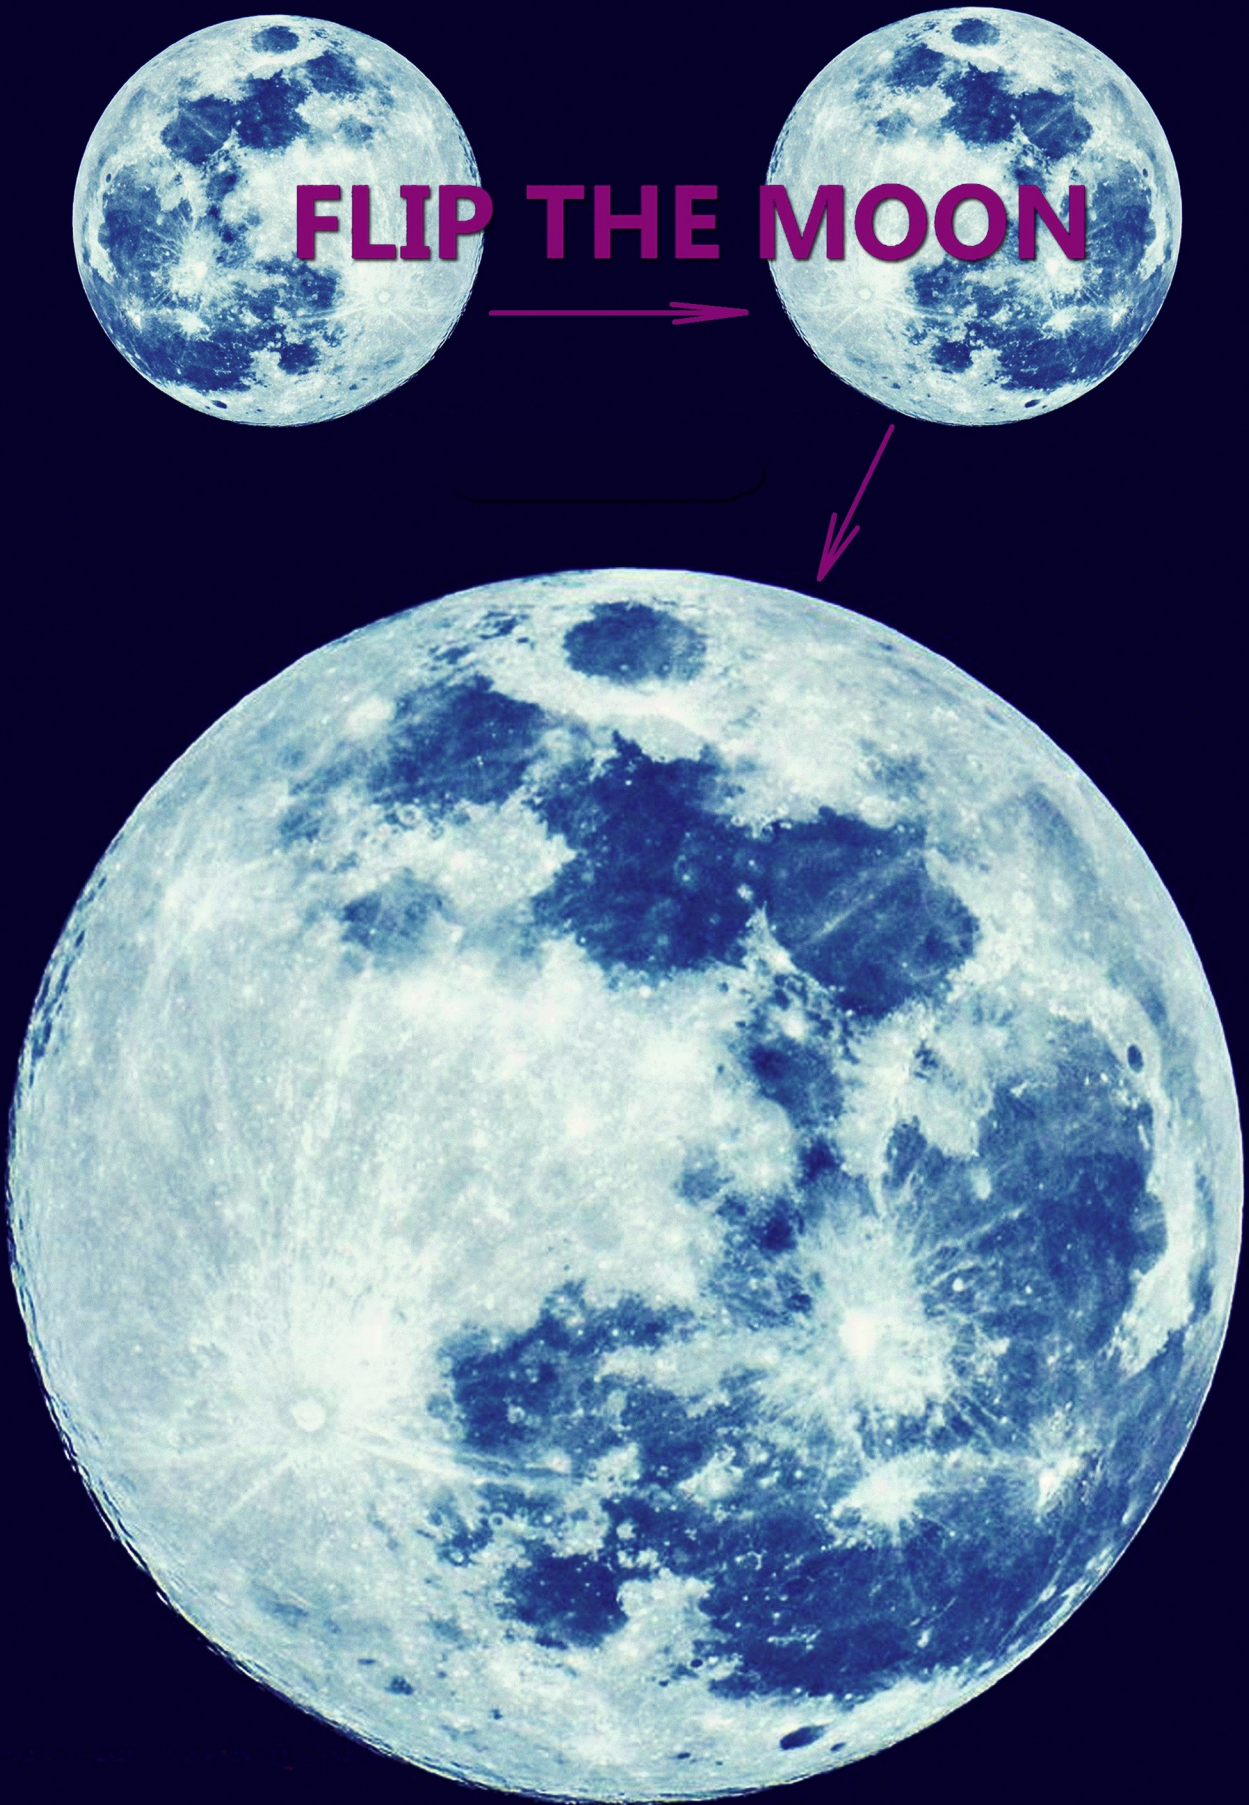

TRANSPARENT SEE THROUGH MOON

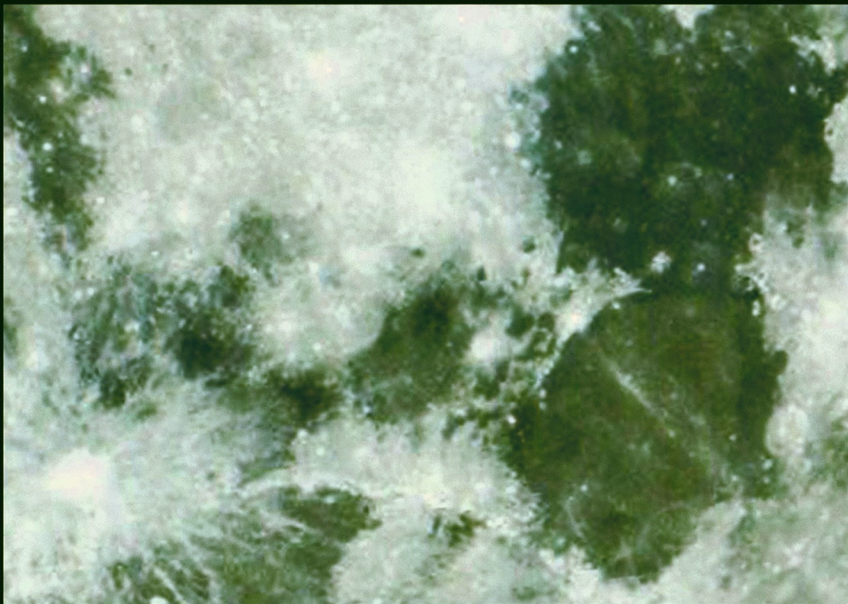

The Moon is transparent
from phase Half Moon till Full Moon
and from Full Moon till Half Moon

DISTANCES

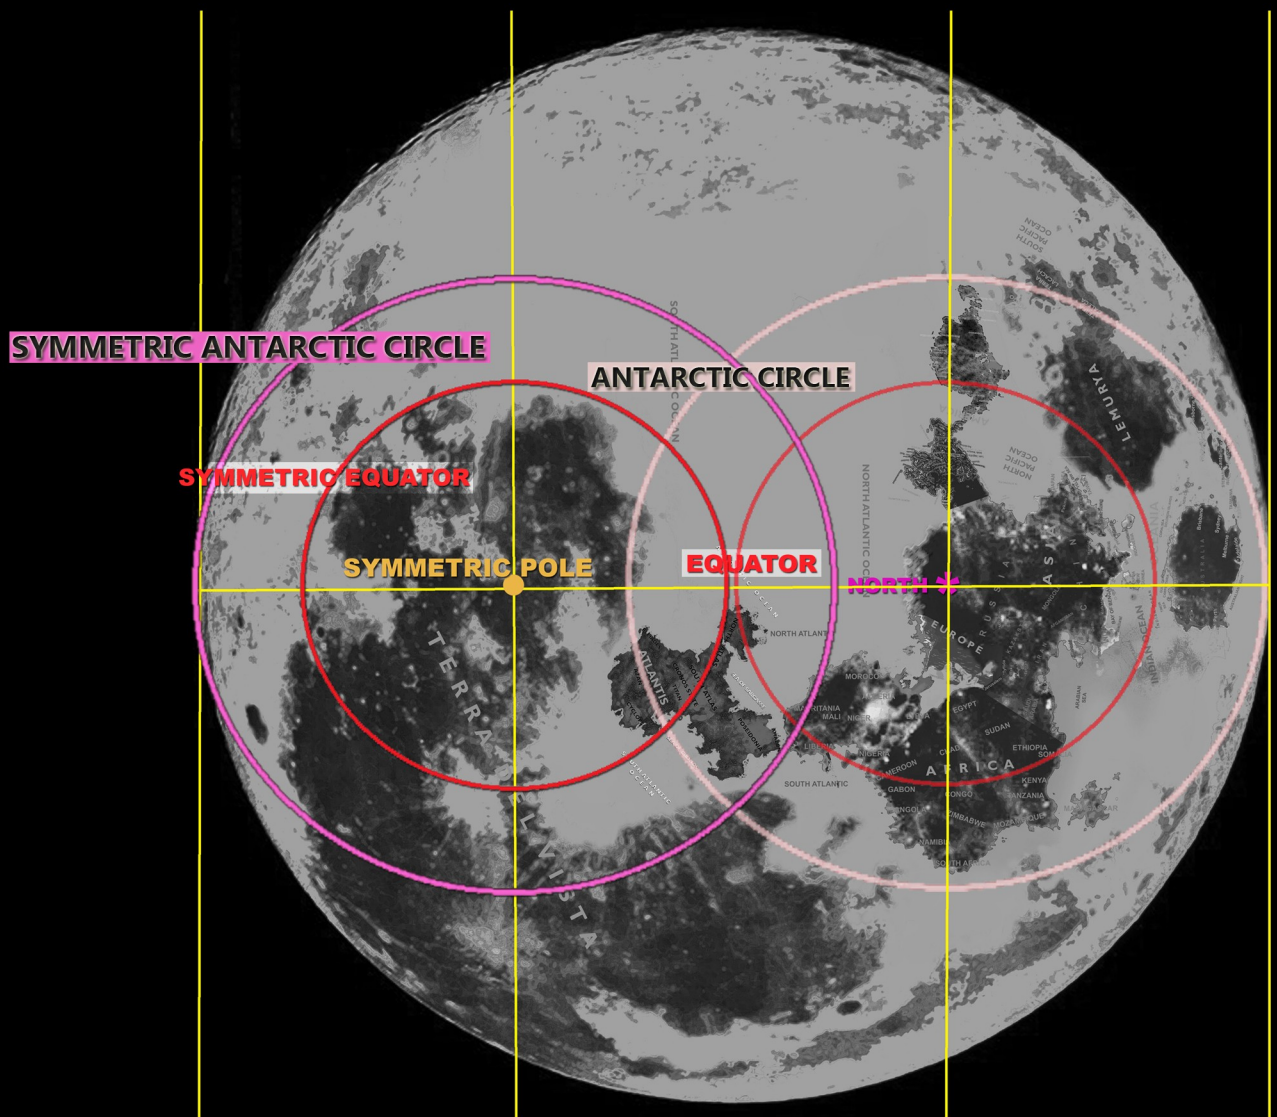

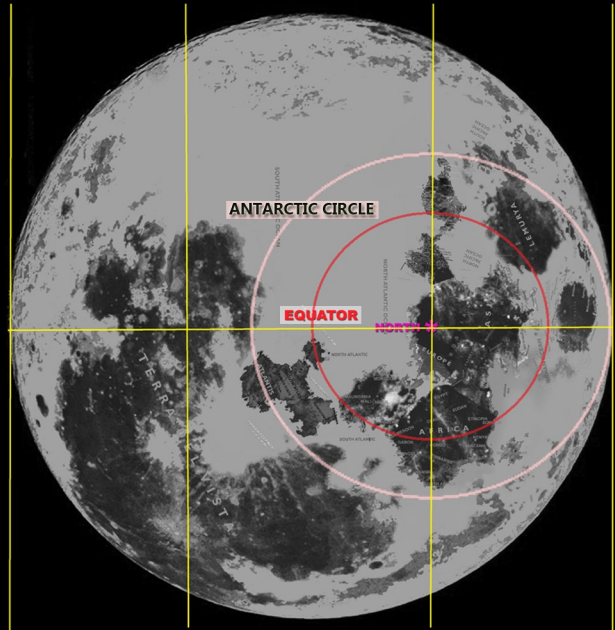

This map of Antarctica displays various geographical features and human activities. Key elements include:

- Major Stations:** Numerous research stations are marked with national flags, including Sigrøy Station, Esperanza Base, Maramba Base, Halley Stations I-VI, Belgrano Station II, Amundsen-Scott Station (Old South Pole Station), Dome Fuji, Dome Argus, Kunlun Station, Mirny Station, Vostok Station, Concordia Station, Casey Station, Damont d'Urville Station, Cape Denison, Dumont d'Urville Sea, King Haakon VII Sea, Svalbard Station, Princess Elizabeth Station, Troll Station, Sørge IV Station, Neumayer Station II, Aboa Station, Esperanza Base, Maramba Base, Halley Stations I-VI, Belgrano Station II, Amundsen-Scott Station, Dome Fuji, Dome Argus, Kunlun Station, Mirny Station, Vostok Station, Concordia Station, Casey Station, Damont d'Urville Station, Cape Denison, Dumont d'Urville Sea, King Haakon VII Sea, Svalbard Station, Princess Elizabeth Station, Troll Station, Sørge IV Station, Neumayer Station II, Aboa Station.
- Ice Shelves and Seas:** Labeled regions include the Antarctic Circle, Ross Ice Shelf, Ronne Ice Shelf, Weddell Sea, Bellingshausen Sea, Amundsen Sea, and the Pacific Ocean.
- Expedition Routes:**
 - Red line:** Amundsen reaches South Pole on 14/12/1911
 - Green line:** Scott reaches South Pole on 17/01/1912
 - Blue dashed line:** Byrd reaches South Pole on 23/11/1952 (by air)
 - Black dashed line:** Fuchs and Hillary's Trans-Antarctic Expedition, 1958
- Other Features:** The map also shows the South Pole, Mount Tyree (4,852m), Mount Kirkpatrick (4,528m), Mount Mawson (4,351m), Mount Erebus (3,794m), and various other geographical markers like the Antarctic Peninsula and the Ross Sea.

MANY ANTARCTICAS

CONSTELLATIONS AND MOON PHASES

NEW MOON

FULL MOON

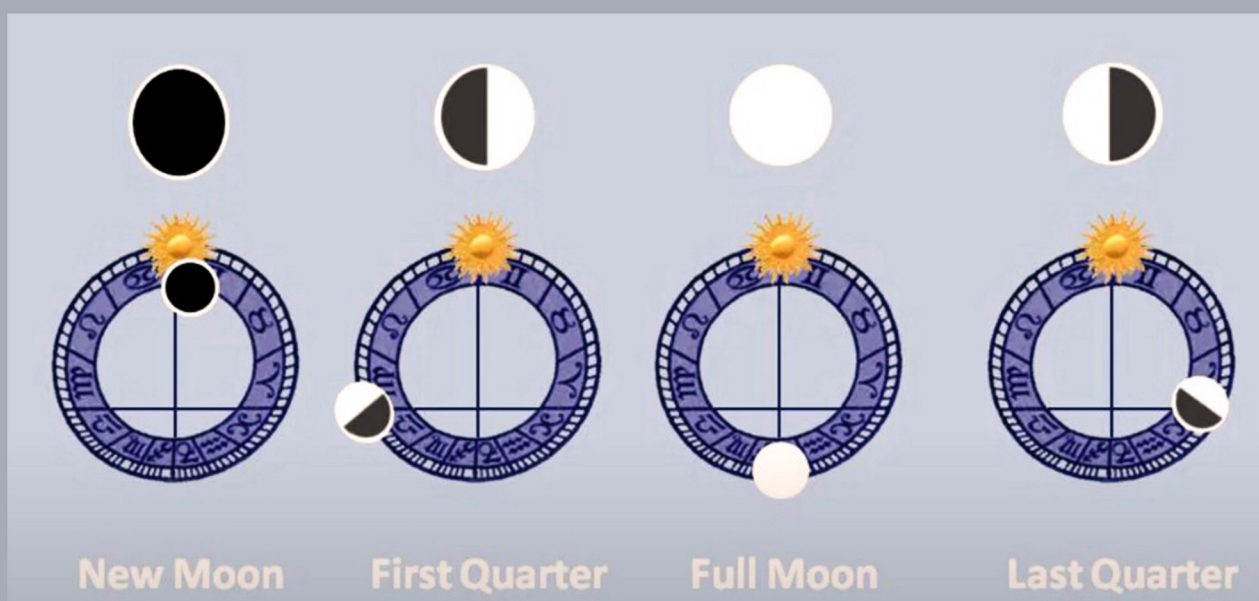

FIRST QUARTER

LAST QUARTER

CONSTELLATIONS AND MOON PHASES

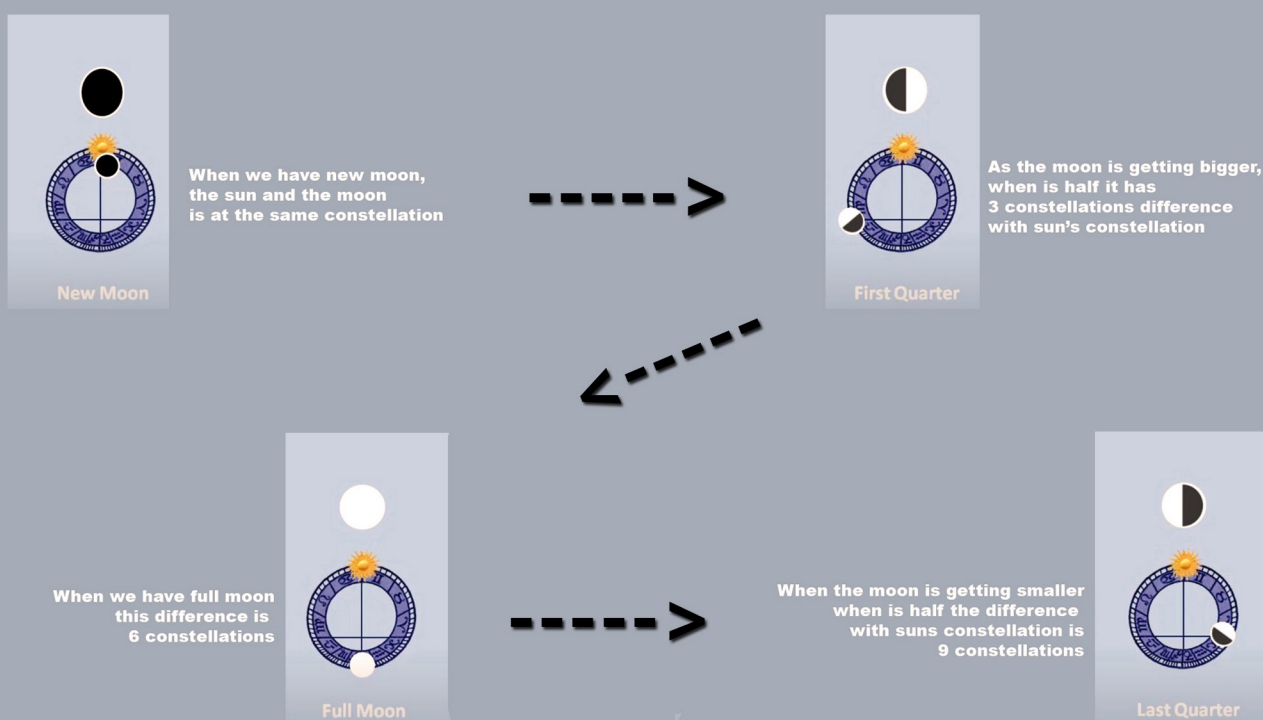

When we have new moon , the sun and the moon is at the same constellation. At First quarter, there is a difference of 3 constellations, on the constellation circle between the sun and the moon. That means 90 degrees difference from the Magnetic North.

At full moon, this difference is 6 constellations.

That means 180 degrees difference.

Finally at last quarter there is a 9 constellations difference.

That means 270 degrees difference.

CONSTELLATION CIRCLE

THIS IS THE CONSTELLATION DISK - CIRCLE.
ONE CIRCLE REPRESENTS A YEAR.

A. CENTER

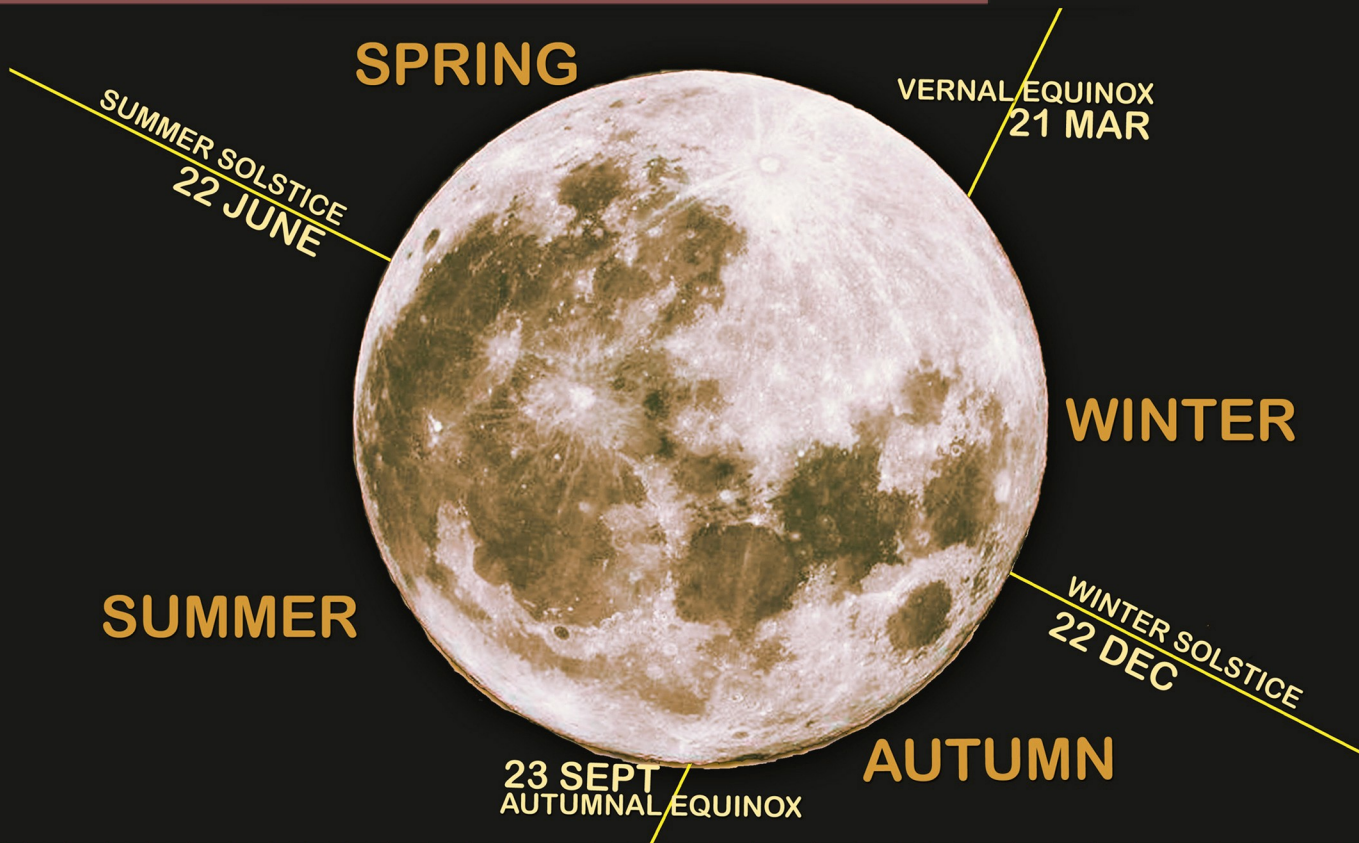

B. SEASONS

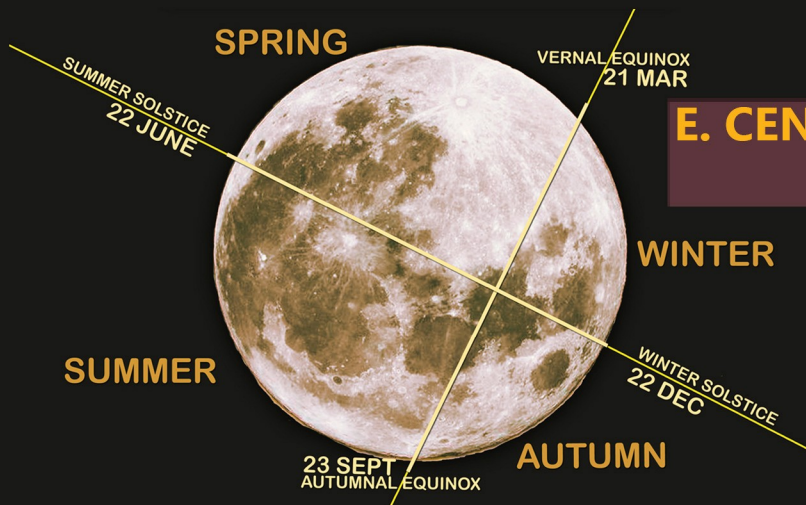

C. DATES

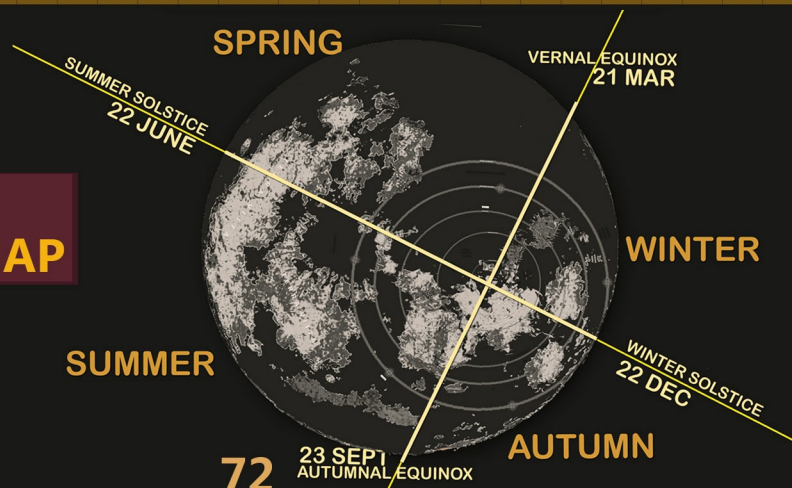

D. MOON ON CONSTELLATION CIRCLE

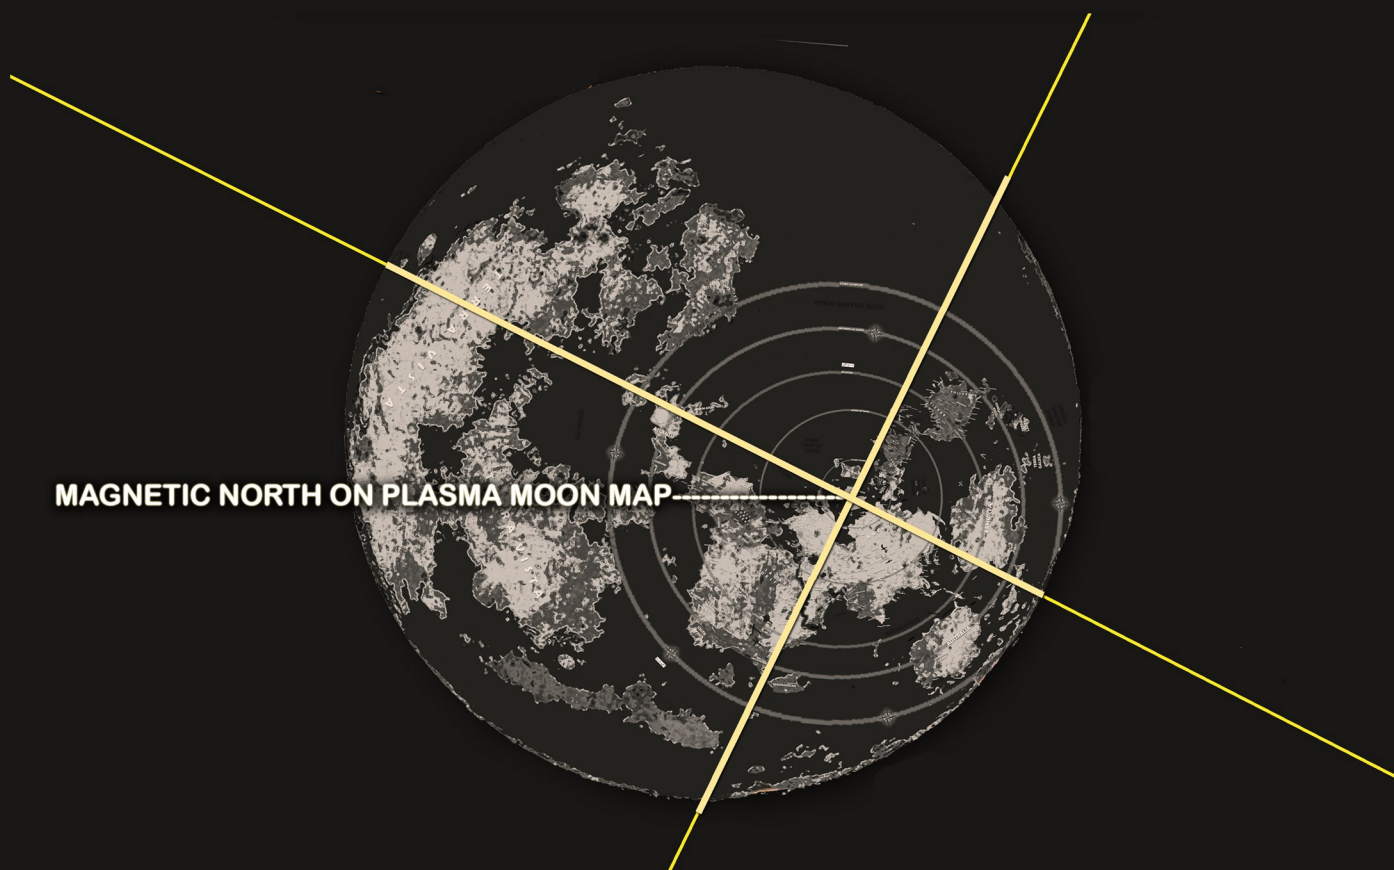

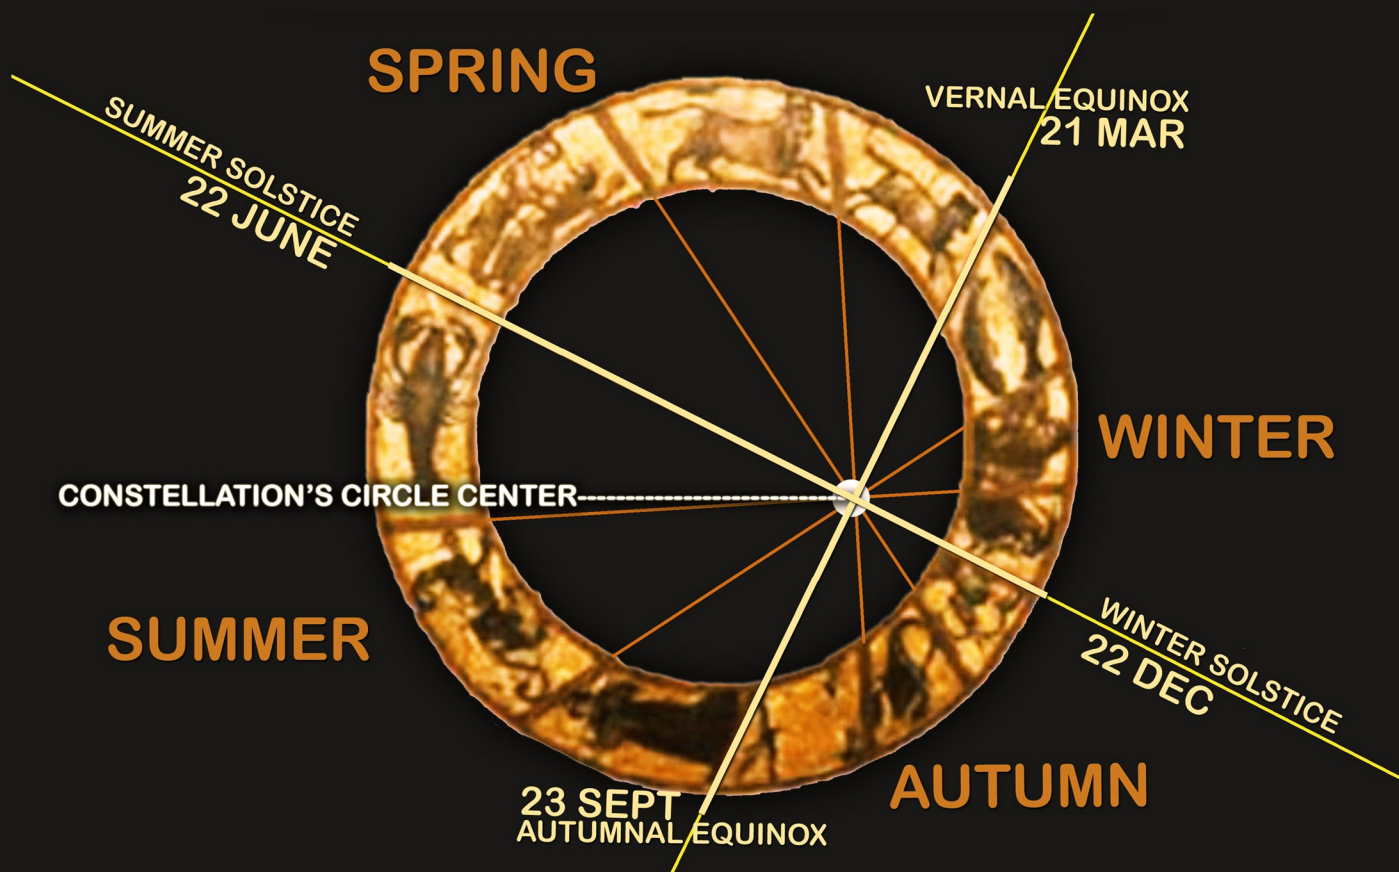

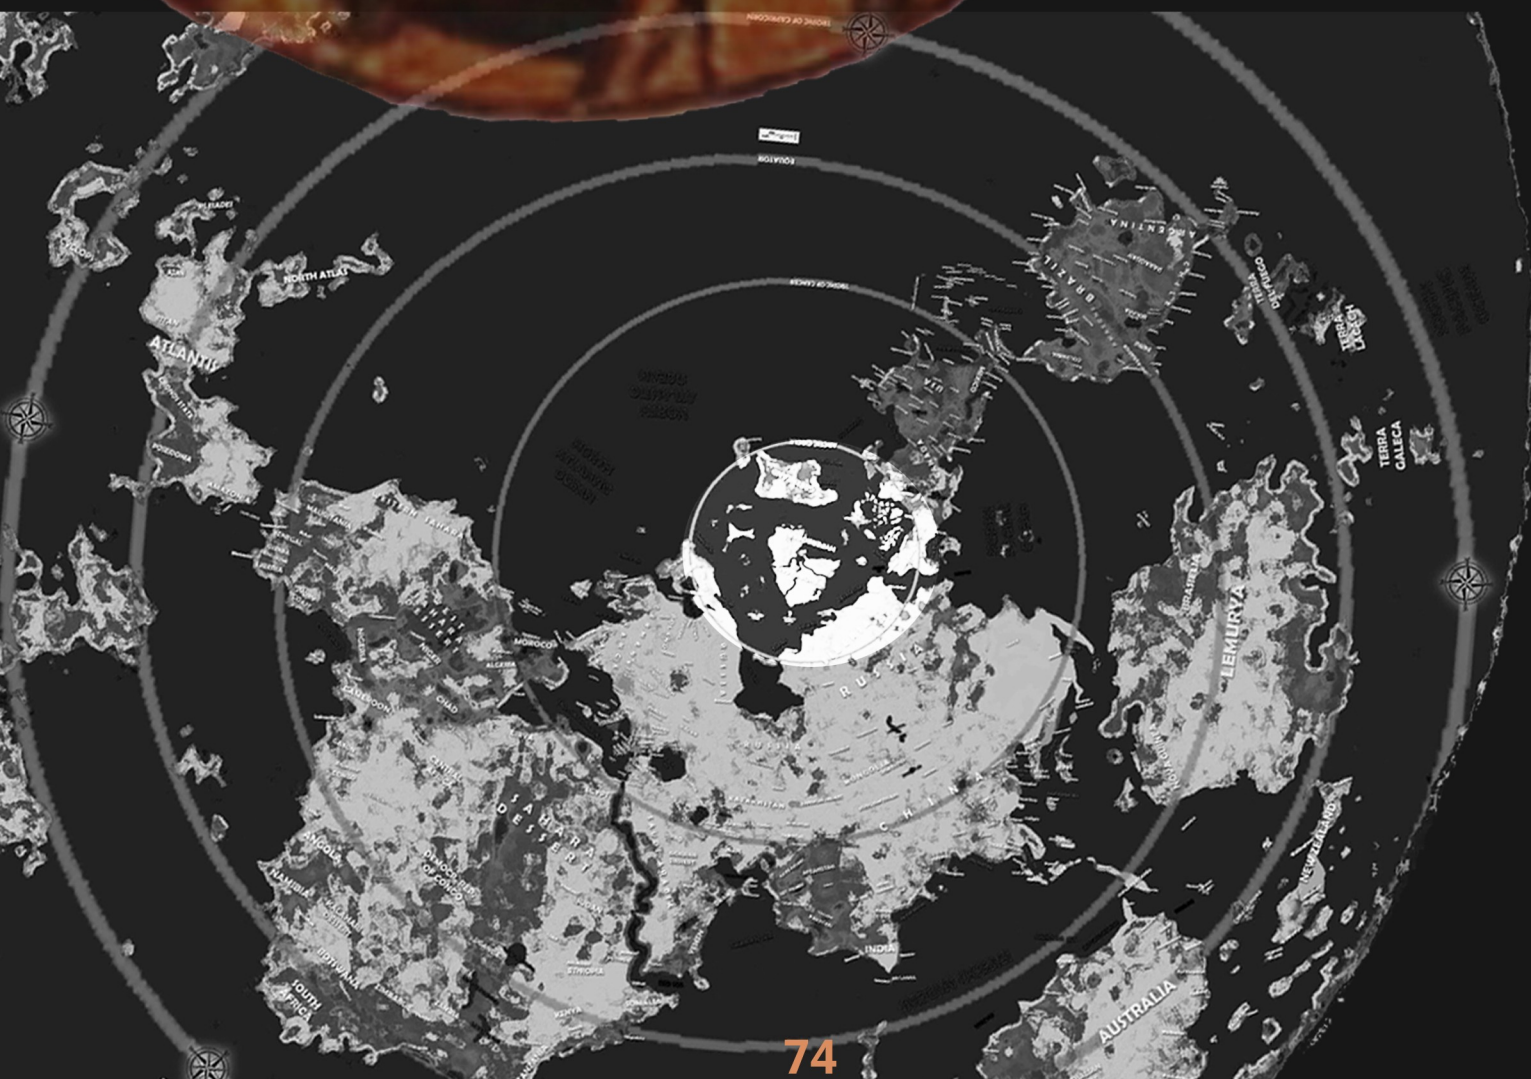

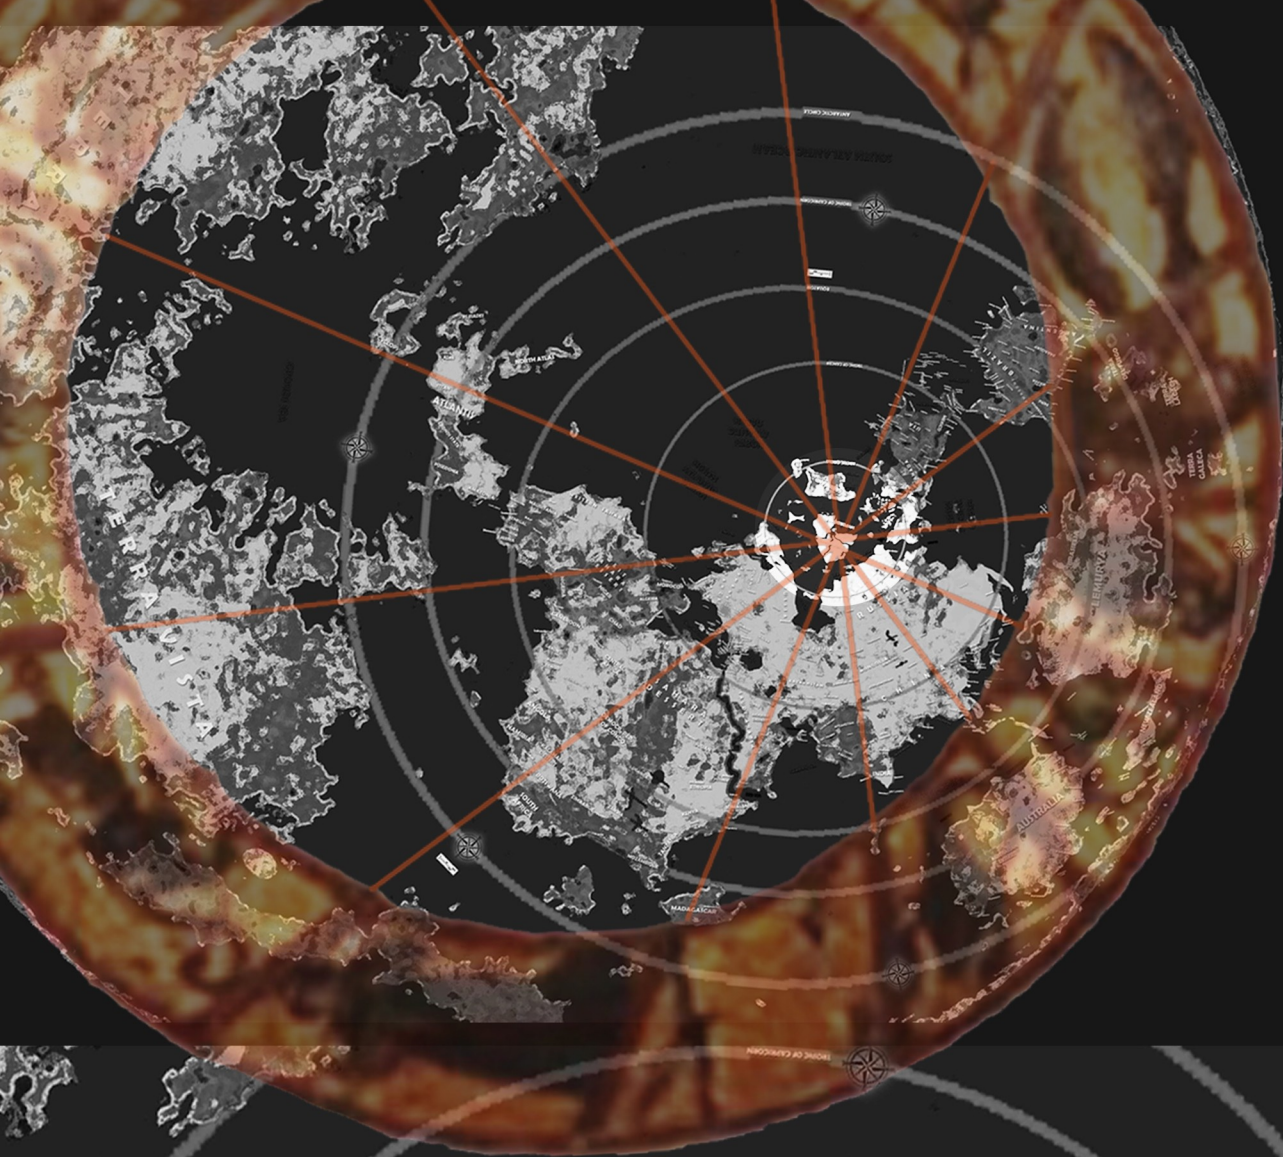

E. CENTER OF CONSTELLATION CIRCLE ON THE MOON

F. THIS PLACE ON PLASMA MOON MAP

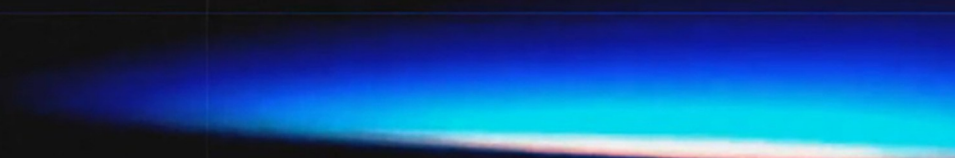

DAYLIGHT

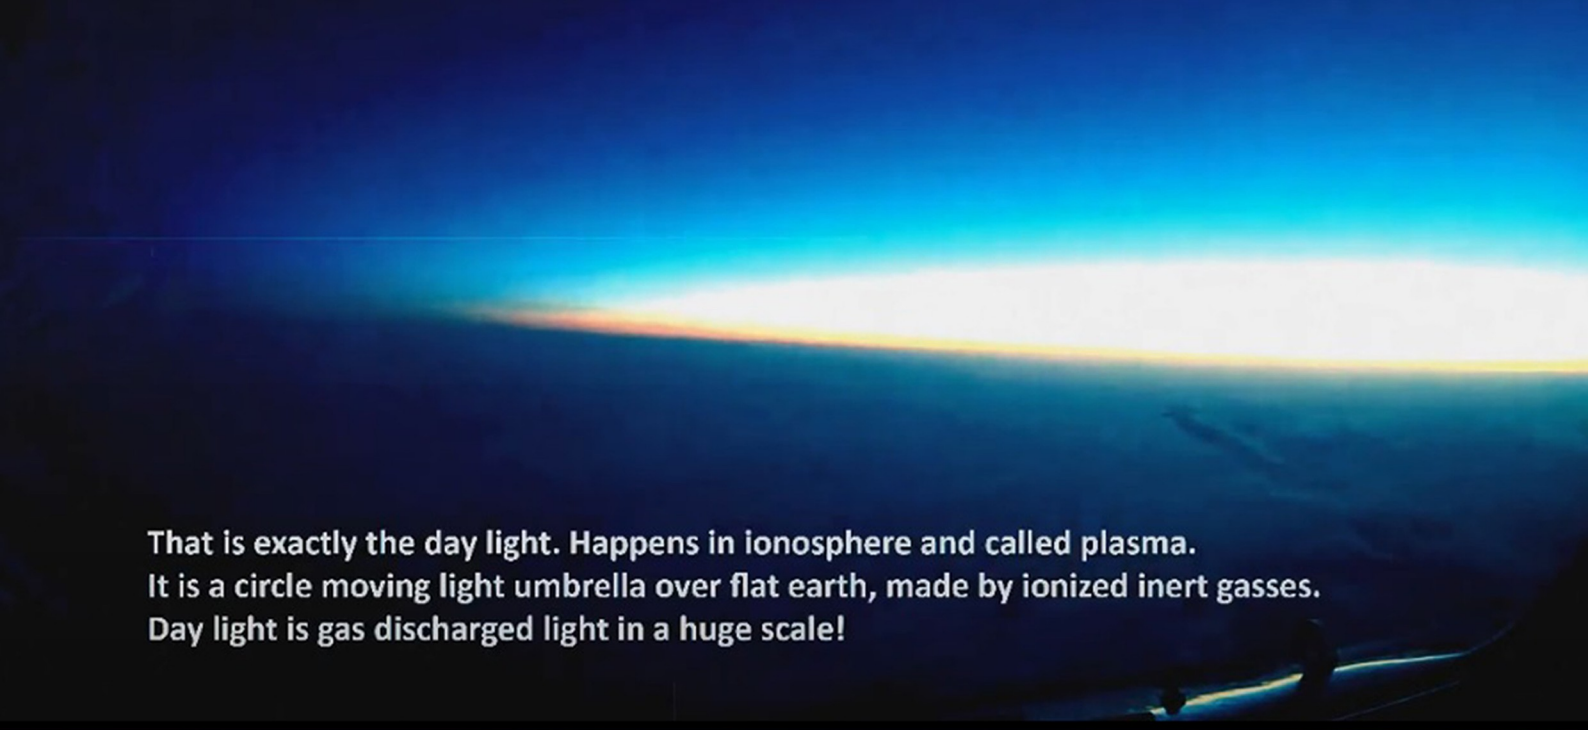

Ionosphere is the upper portion of atmosphere and starts from 40 Km height. There, there are the inert gasses, that they are separated on layers, according to their molecular mass.

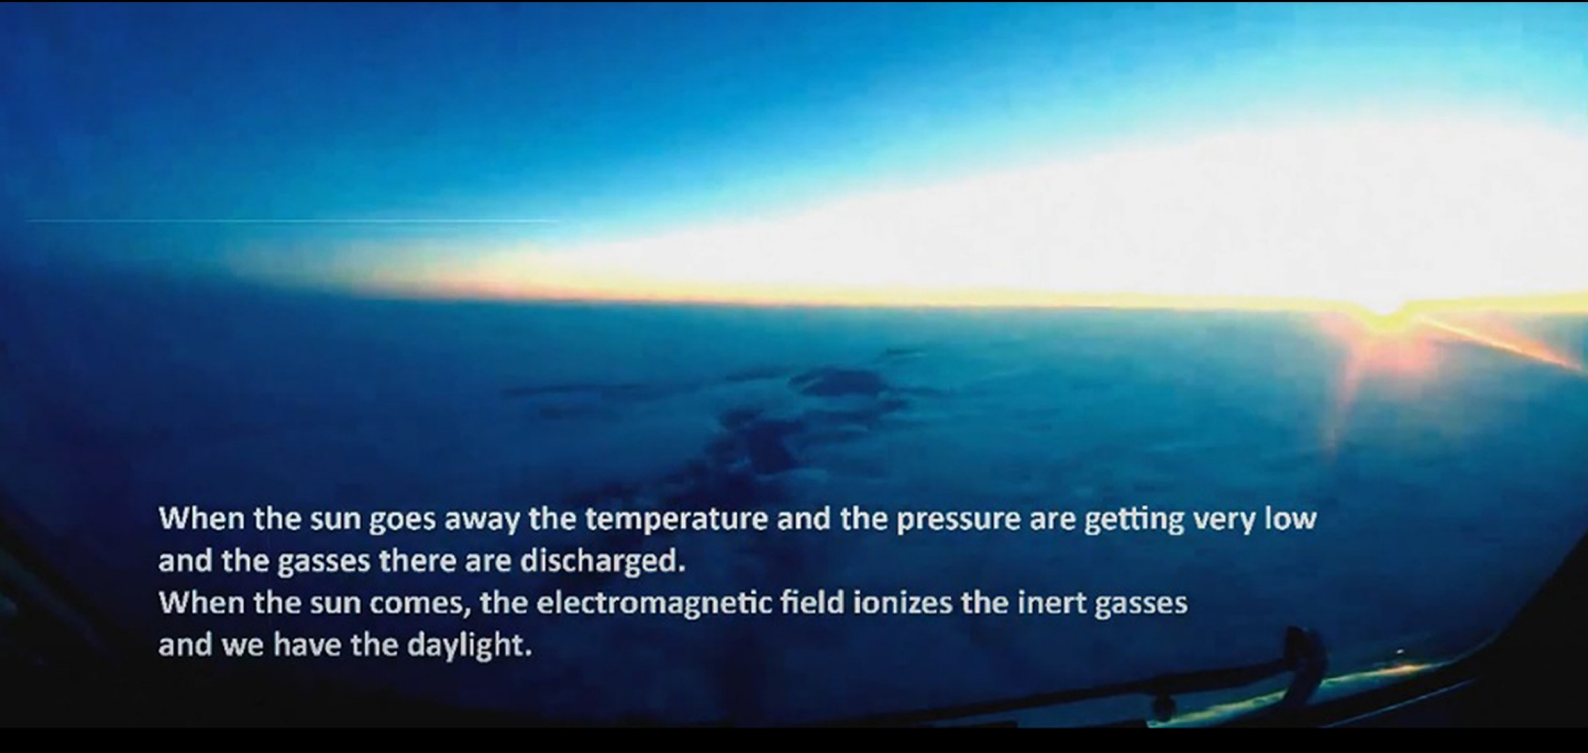

Sun happens in ionosphere and makes circles over flat earth. It is the pilot light – electromagnetic field and due to this light, there are shadows. It gives the direct light.

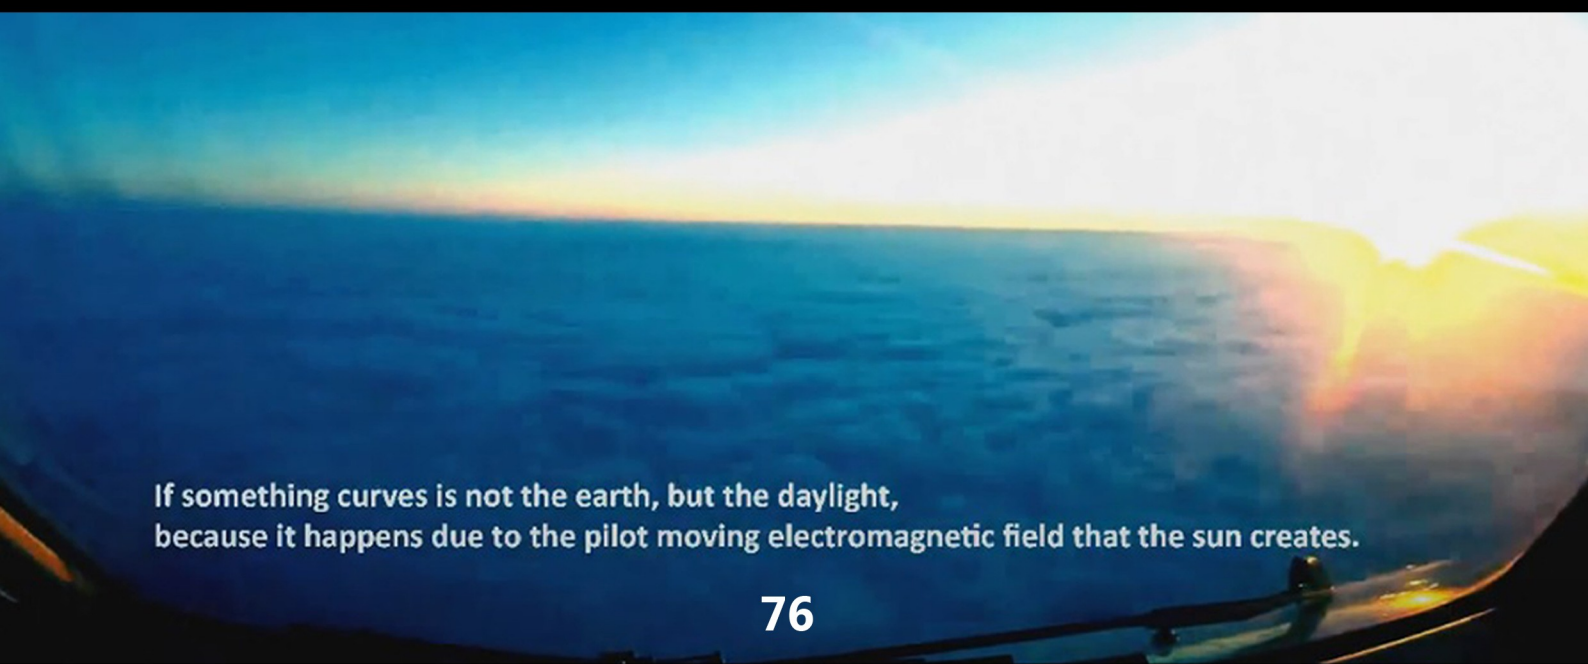

Sun creates, an also moving curved electromagnetic field around it, that makes all the inert gases in ionosphere, around the topical sun, to react being ionized, giving fluorescence.

That is exactly the day light. Happens in ionosphere and called plasma.
It is a circle moving light umbrella over flat earth, made by ionized inert gasses.
Day light is gas discharged light in a huge scale!

When the sun goes away the temperature and the pressure are getting very low
and the gasses there are discharged.
When the sun comes, the electromagnetic field ionizes the inert gasses
and we have the daylight.

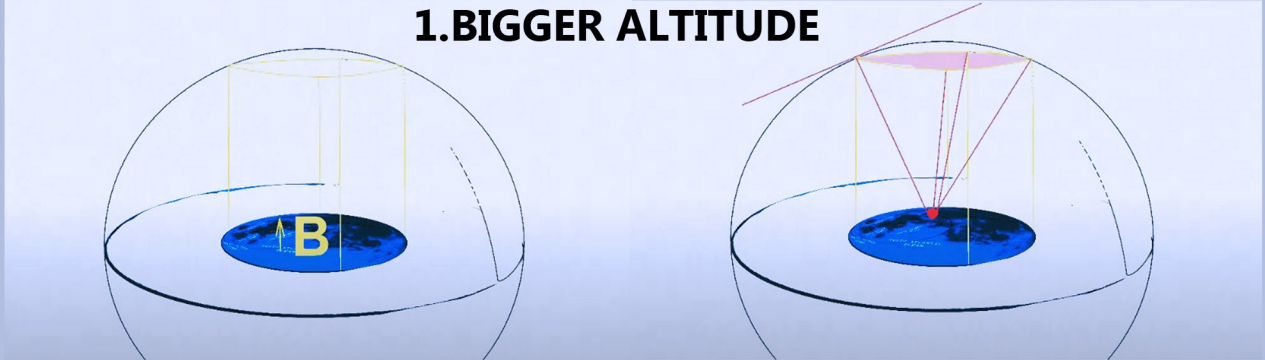

If something curves is not the earth, but the daylight,
because it happens due to the pilot moving electromagnetic field that the sun creates.

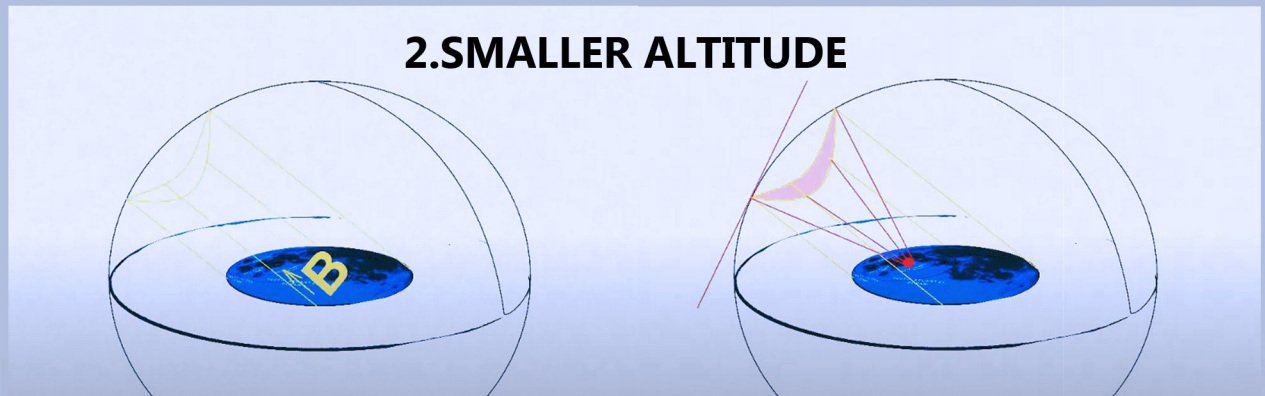

MOON PHASES

The different altitude that the moon happens is the reason of the moon phases.

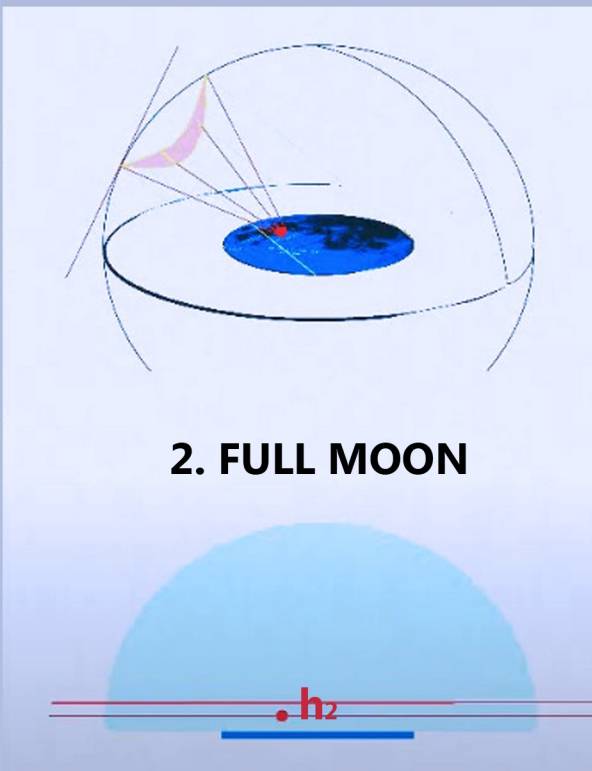

1. BIGGER ALTITUDE

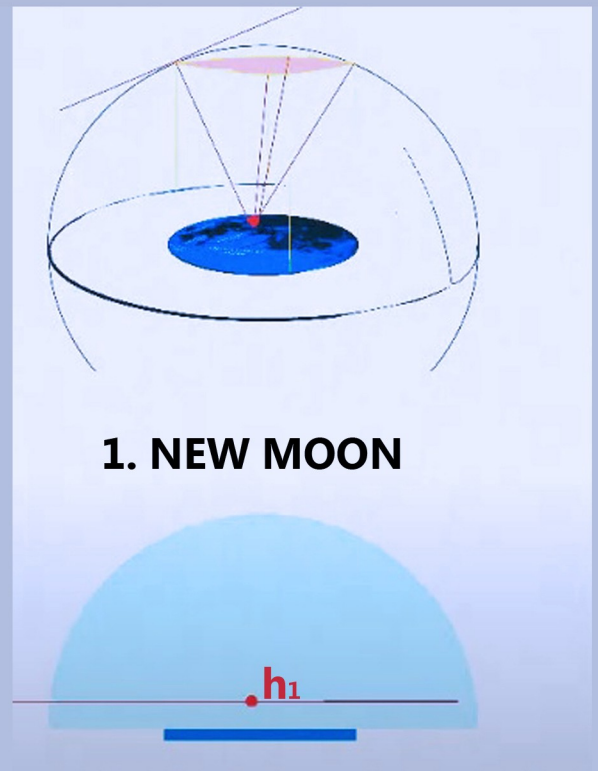

2. SMALLER ALTITUDE

2. FULL MOON

1. NEW MOON

1ST CEILING

2ND CEILING

**MERCURY AND VENUS ARE BETWEEN THE 2ND AND THE 3RD CEILING.
THEY ARE BOTH AETHERIAL IMPRINTS REPRESENTING WHAT IS INCLUDED BELOW.**

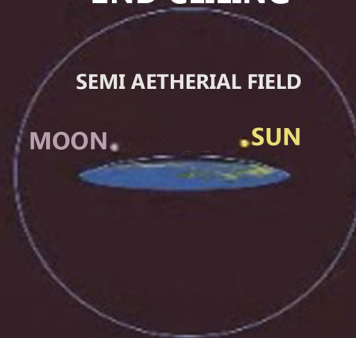

MERCURY

VENUS

2ND CEILING

3RD CEILING

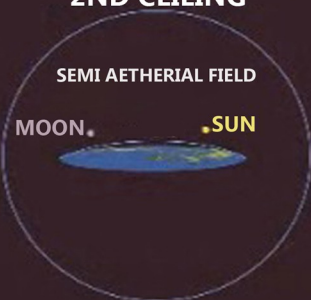

MERCURY

VENUS

2ND CEILING

MARS AETHERIAL INPRINT IS BETWEEN THE 3RD AND THE 4TH CEILING REPRESENTING WHAT IS INCLUDED BELOW

MARS

THE 3RD CEILING

4TH CEILING

JUPITER AETHERIAL INPRINT IS BETWEEN 4TH THE 5TH CEILING
REPRESENTING WHAT IS INCLUDED BELOW

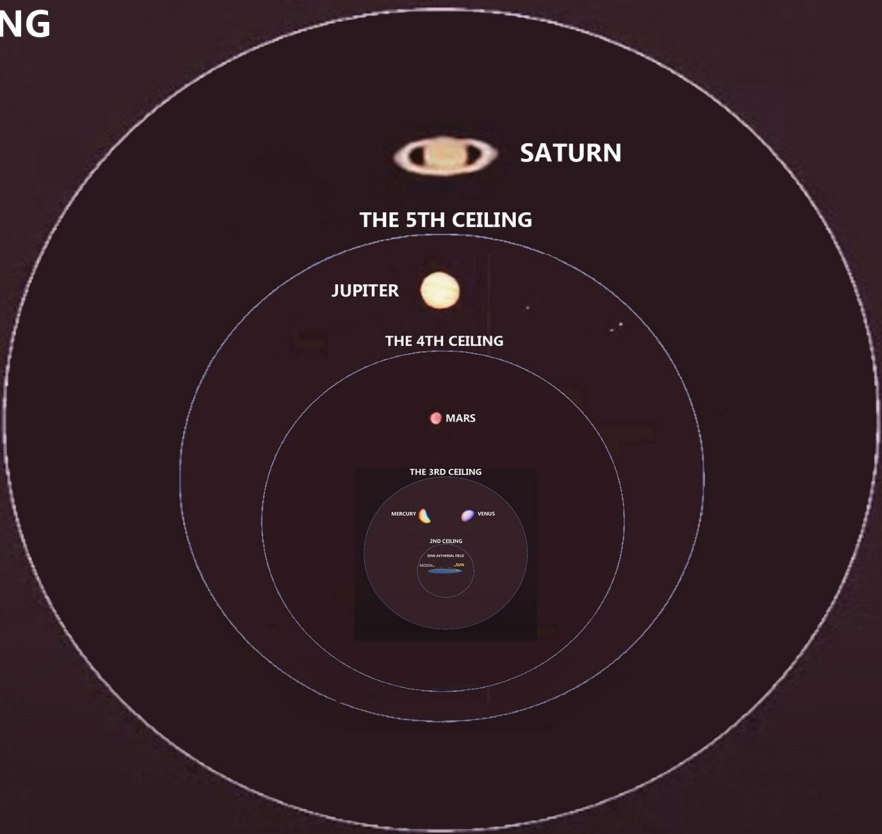

5TH CEILING

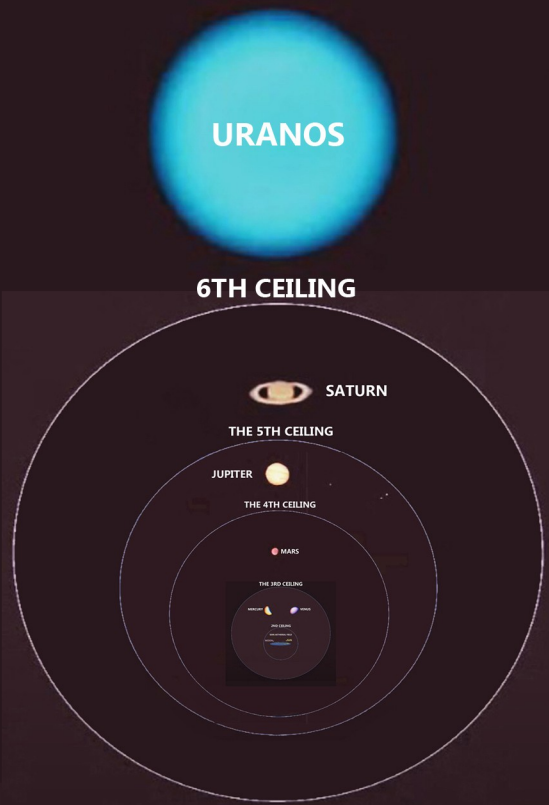

**SATURN AETHERIAL INPRINT IS BETWEEN 5TH AND 6TH CEILING
REPRESENTING WHAT IS INCLUDED BELOW.**

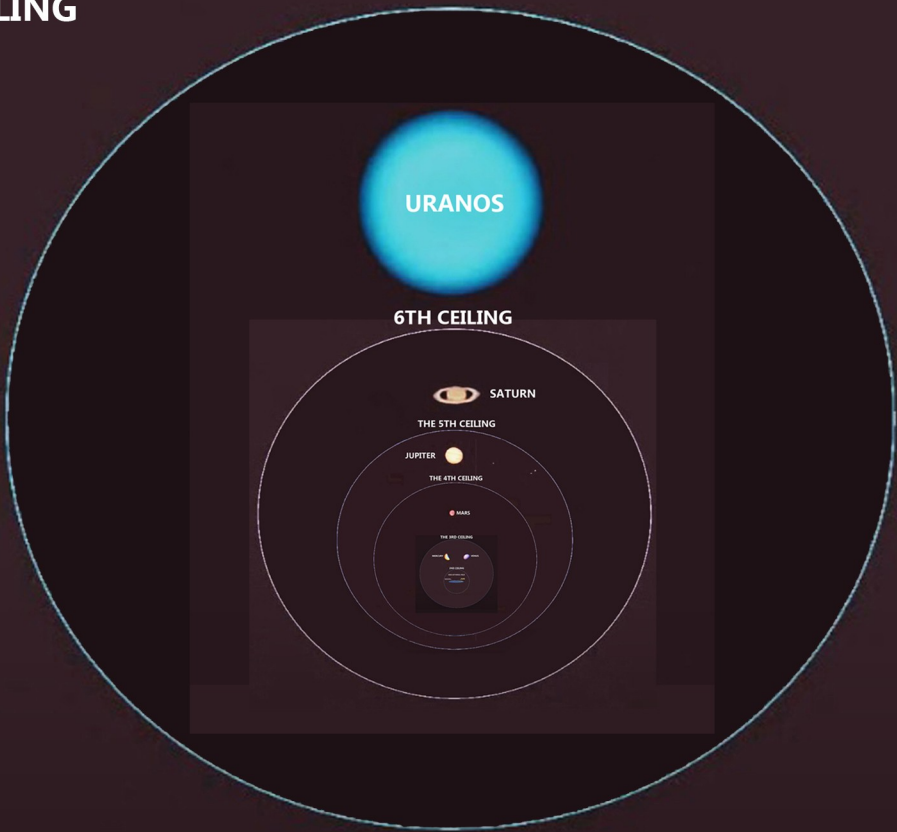

6TH CEILING

URANOS IS BETWEEN THE 6TH AND THE 7TH CEILING REPRESENTING ALL BELOW.

7TH CEILING

The planets are electromagnetic toroidal fields forms, one field inside the other. The inner field with the outer, are separated with an electromagnetic ceiling, letting below an imprint with what is included below in an aetherial environment.

Planets are these imprints, having an aetherial nature and not a solid or material constitution that can contain earthly physical life.

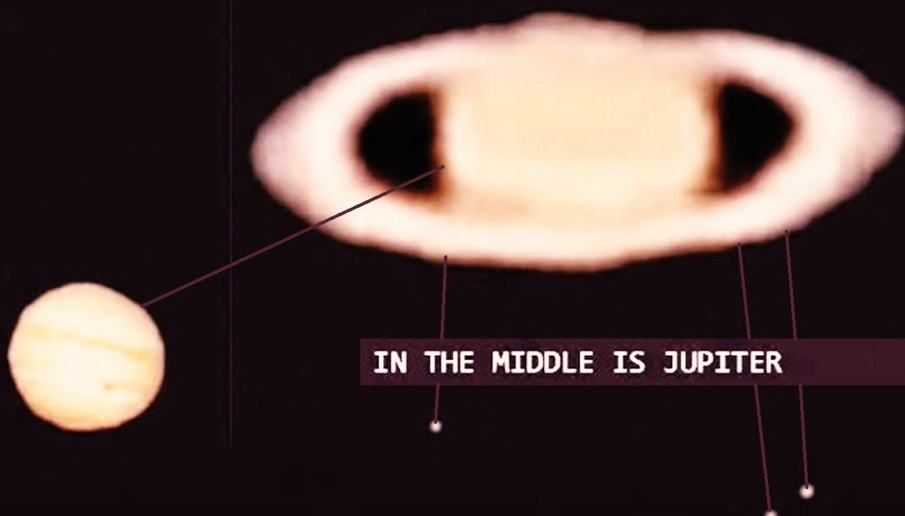

FOCUSED COSMIC IMPRINTS IN PRINT ON AETHER

EACH TOROID FIELD GIVES AN INPRINT SHOWING WHAT IS INCLUDED

URANOS AETHERIAL INPRINT INCLUDES SATURN

IN SATURN WE SEE WHAT IS INCLUDED BELLOW.

IN THE MIDDLE IS JUPITER

AND THE RINGS OF SATURN ARE THE AETHERIAL INPRINTS OF THE SATELLITES OF JUPITER

INSIDE JUPITER'S AETHERIAL FIELD, THE RED DOT INSIDE
IS MARS AETHERIAL FIELD

INSIDE JUPITER WE SEE MARS

THROUGH THE SEVEN CEILINGS

Moon is a semi - aetherial phenomenon.

On the moon we can see the Material Field below.

In the next Aetherial Layer Mercury and Venus works like the sun and the moon.

On Mercury we can see the light energy and on Venus the dark energy that is included below.(Page 79)

In the next Aetherial Layer , Mars Field includes all the previous Layers.

On Mars we can see Mercury and Venus fields together. (Page 80)

In the next Aetherial Layer , Jupiter Field includes Mars Field.

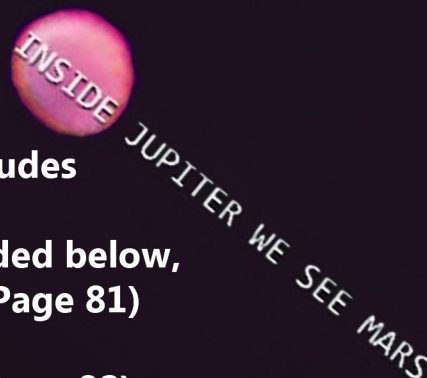

On Jupiter we see all the fields that are included below, in the Mars field that is included in Jupiter. (Page 81)

The next Aetherial Field is Saturn Field.

On Saturn ,inside the rings, we see Jupiter. (Page 82)

The rings of Saturn are the Aetherial imprint of Jupiter's satellites. (Page 84)

These Aetherial Fields are included in Uranos Aetherial Field. (Page 83)

SEMI - TRANSPARENT MOON

**When the moon is getting bigger from half moon and after the “shadow” place is... transparent.
Also when is getting smaller from full moon to half moon happens the same.**

COSMIC PLASMA PHENOMENON

Moon is not a solid object.

Is a focused mirrored electromagnetic plasma phenomenon caused by the magnetic field from bellow.

It happens due to photochemical reactions in ionosphere and in the aetherial field above.

The moon is a focused electromagnetic phenomenon, called plasma. Cosmic electromagnetic energy comes below from the flat and stationary plane, going above. The inner reflection of this electromagnetic energy on this field's ceiling, turns it back down, creating a focus spot point in a semi aetherial environment. At this spot, there is fluorescence of the aether because of the focused cosmic electromagnetic energy. The spot that is created is the moon.

(4th state of matter as specified publicly by the american astrophysical professor Among R Foster in 1965)
In this way, the Moon reveals to us the large part of the terrestrial and oceanic surface and with these natural characteristics serves as a natural map of Earth..

VIBES OF COSMOS
